

Isolating Oil. Improving Performance.

In addition to a line of high quality oil treaters, Cimarron has made its mark on the crude production industry by developing a better way to separate hydrocarbons and water. Our patent pending Chad Separator design controls slugs of oil and water, preventing carry-over between outlets and isolating as much oil as possible. Each unit is built using the latest engineering techniques and rigorous safety methods. Our oil production equipment is made to out-perform the competition even in the harshest conditions.

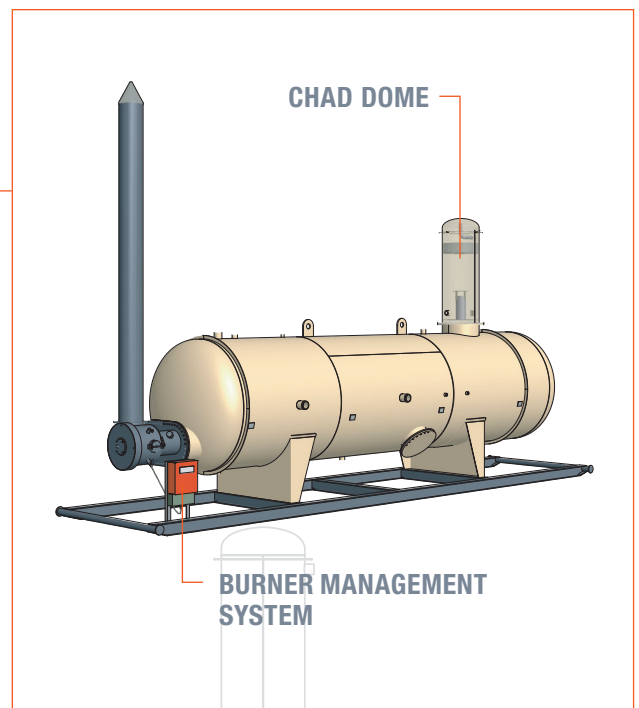

OIL PRODUCT DETAILS

CHAD STYLE DESIGN

- 50-135% increased gas flow capability
- Handles liquid slugs
- Utilizes gas velocity changes and baffle impingement to minimize liquid carry-over
- A secondary mist pad is provided to complete liquid elimination in the outlet gas

BURNER MANAGEMENT SYSTEM BENEFITS

- Custom designed to light and maintain flame
- Reduces fuel gas consumption
- Ensures continual unit operations for increased productivity and safety
- Environmentally-friendly by reducing fugitive emissions
- Options available including remote operations and data logging
- Designed for multiple burner applications
